HISTORICAL RETURNS DATA—US DOLLARS

The Evolution of Dimensional's

FIXED INCOME INVESTING

Dimensional launched its first bond strategy nearly 40 years ago, pioneering a systematic approach to value-added fixed income investing. Over the decades, we have implemented fixed income strategies in markets around the world, developing deep expertise into what drives expected returns across bonds. Through an incremental process, we have developed new investment applications and enhancements, resulting in a broad set of systematic solutions designed to meet the diverse needs of investors.

From the beginning, Dimensional has based its fixed income approach on a singular investment philosophy and a deep understanding of the drivers of a bond's return. Whether investing in fixed income or equities, we believe market prices reflect the aggregate expectations of market participants and provide real-time information about differences in expected returns. We do not invest based on predictions of future changes in interest rates, as decades of empirical research have shown forecasts to be unreliable. We believe combining market principles with a systematic investment approach differentiates Dimensional from peers.

Starting with a single strategy in 1983, we expanded our offering to help clients tailor their exposure across the duration and credit spectrums and choose between a domestic or global opportunity set. We also implemented meaningful enhancements to our approach through time, leading to improvements in risk management and trading strategies.

Ongoing work by academics and Dimensional researchers, advancements in market mechanisms, and shifts in how clients view the role of fixed income contributed to this evolution. These intertwining developments have provided many opportunities for innovation and informed new investment solutions.

Let's take a walk through the decades.

In 1983, Dimensional got its start in fixed income with the launch of a **US ultra-short duration** strategy, implementing findings from Professor Eugene Fama's research on the relation between forward interest rates and subsequent returns.¹

► What we knew then—and what remains true today—is that a bond's return has three primary components: the yield, the expected capital appreciation or depreciation over the holding period based on the current yield curve, and the return due to future interest rate changes. The first two components are known and observable today and combine to form the forward rate. Fama's work found that observed forward rates contain reliable information about future differences in expected bond returns.

This research led to the development of Dimensional's **variable maturity approach**, which remains integral to our strategies today. Dimensional uses the information available in forward rates to identify bonds with the highest expected returns, within a strategy's guidelines, and varies duration by targeting those securities. Generally, this approach implies that, within pre-defined ranges or relative to a benchmark, our strategies will pursue longer duration bonds where yield curves are upward sloping and shorter duration bonds where yield curves are flat or inverted.

Dimensional expanded its offering in the 1990s to include global bonds with the launch of a **global short duration** strategy. The approach was guided by Fama's 1980s research on forward and spot exchange rates² and additional work in the 1990s between Fama and Dimensional on currency-hedged global investing.

► Investing in global bonds on a currency-hedged basis offered investors several potential benefits, including a broader opportunity set for identifying bonds with higher expected returns and diversification of duration exposure. Using information in forward rates, we can identify bonds issued in different currencies that offer higher expected returns and increase a portfolio's allocation to those securities. Because global yield curves do not move in tandem, a global portfolio can also manage the risk of unexpected changes in rates across individual yield curves.

Dimensional's first **intermediate duration** strategy was also introduced in the 1990s, designed to meet the needs of investors seeking a marketlike portfolio duration while pursuing greater-than-market returns. The strategy pursued a targeted duration similar to a market benchmark while allocating to a subset of bonds offering higher expected returns. This approach—rather than investing across all maturities³—was the crucial insight underpinning the strategy. The design of this portfolio established a value-added approach for duration-constrained investing and formed the basis for future benchmark-relative strategies.⁴

1980s

MAJOR RESEARCH AND MARKET IMPROVEMENTS

Information in the Term Structure

Eugene Fama's pioneering research finds that implied forward rates from the current term structure provide reliable information about expected returns across the duration spectrum.

STRATEGY APPLICATIONS AND ENHANCEMENTS

Variable Maturity Approach

Dimensional launches its first fixed income strategy in 1983. The new approach uses information in the current term structure to identify areas of higher expected return on the yield curve without relying on future interest rate predictions.

Currency-Hedged Global Yield Curves

In collaboration with Eugene Fama, Dimensional finds that forward rates across currency-hedged global yield curves provide information about differences in expected returns among global bonds.

Global Opportunity Set

Dimensional begins investing in currency-hedged global bonds, expanding the opportunity set for pursuing higher expected returns.

Investing with Duration Constraints

Dimensional develops its first strategy intended to outperform a market benchmark while targeting a similar average duration.

Variable Maturity Approach

● Portfolio position

Upward Sloping Yield Curve

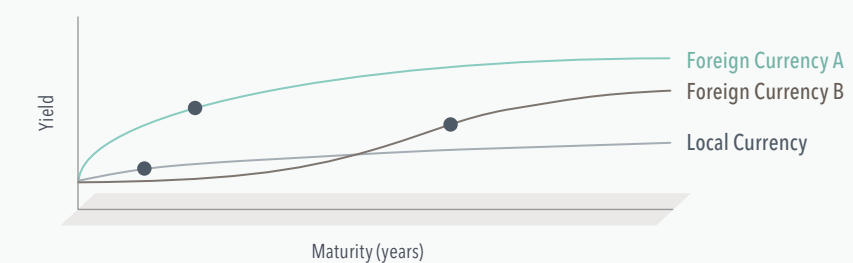

Flat or Inverted Yield Curve

Current market prices, as reflected in yield curves, contain information about differences in expected returns among bonds. Dimensional uses this information to improve expected returns by varying the duration of the portfolio based on the current yield curve.

Global Bonds: Expanding the Opportunity Set

● Point of highest expected return

Yield curves in different countries often have different levels and slopes. Investing in multiple yield curves on a currency-hedged basis can enhance diversification and reduce volatility. Dimensional applies the variable maturity approach to yield curves in markets around the world in pursuit of higher expected returns.

In the new century, the 2002 introduction of the **Trade Reporting and Compliance Engine (TRACE)** proved to be a major advance for the US bond market. The system requires dealers to report over-the-counter secondary market transactions in USD-denominated corporate bonds, agency bonds, and securitized products within 15 minutes of an execution. With TRACE, the fixed income market finally had bond trade transparency similar to the price visibility afforded to equity investors with the ticker tape.

► Prior to this development in the bond market, Dimensional's fixed income strategies focused on the highest-quality investment grade issues. After TRACE launched, Dimensional spent several years studying bond trade data, which provided a higher-resolution view of the full corporate bond market. The research confirmed that differences in forward rates contain reliable information about differences in expected returns not only across the duration spectrum but also across the credit spectrum and ultimately informed our **variable credit approach**.

Variable credit was first introduced in Dimensional's **credit** and **core fixed income** strategies, which extended the eligible credit range down to BBB rated bonds. This approach uses information in forward rates (as captured, for example, by credit spreads) to identify bonds with higher expected returns across eligible yield curves of varying credit quality and dynamically allocate to those securities. In practice, the approach increases exposure to eligible bonds with lower credit quality when credit spreads are wider and those securities offer higher expected returns. Conversely, variable credit reduces exposure to eligible bonds with lower credit quality when credit spreads are narrower and expected returns for those securities are lower.

TRACE also provided us with additional opportunities for enhancing Dimensional's risk management processes. We began systematically incorporating TRACE data on traded prices and quantities into our **market-informed credit ratings**, alongside a host of other considerations, such as information in prices of credit default swaps. Specifically, we began to continually monitor market yields of corporate and agency bonds and assign a lower credit rating to those bonds whose yields suggested a higher level of credit risk than indicated by their stated credit ratings. Additionally, because most global borrowers issue bonds denominated in USD, we could infer internal credit ratings for the vast majority of non-US issuers and apply our internal credit monitoring process to non-US and global strategies. This allowed us to improve our credit monitoring process, as our research shows that bonds trading at substantially higher yields than peers with the same credit rating generally perform more like lower-quality bonds and also experience a higher frequency of downgrades.

TRACE has also informed the development of our **inventory modeling** and enhanced our **trade cost analysis**. Dimensional has always employed a flexible

trading approach to reduce implementation costs in our portfolios. Having visibility into daily bond trade data, including whether a dealer was involved in the transaction, allowed us to begin modeling dealer inventory. Gaining an understanding of dealer inventory and holding periods enables us to have a better view of available market liquidity across different bonds, which, paired with our flexible trading approach, generally allows us to trade at favorable prices. Further, TRACE has enabled extensive trade cost analysis that helps measure and monitor outcomes of our flexible trading approach relative to others in the marketplace. Our ongoing analysis and monitoring efforts have consistently validated the benefits of our approach and informed improvements over time.

While TRACE opened up several opportunities for enhancing our investment approach, Dimensional also expanded into new strategy offerings in the 2000s to meet investor needs. These solutions included our first **US municipal bond** and **inflation-linked** strategies, which applied our understanding of the drivers of fixed income returns to new areas of the market.

“Throughout the decades, the one constant in our fixed income evolution has been our reliance on market prices. This has set us apart from other investment managers.”

Dave Plecha
Global Head of Fixed Income

MAJOR RESEARCH AND MARKET IMPROVEMENTS

Improved Bond Trade Transparency

FINRA launches the Trade Reporting and Compliance Engine (TRACE), introducing transaction price and volume transparency to US-denominated bond issues.

Information in Credit Spreads

TRACE data spurs robust research into credit markets. Dimensional finds that current credit spreads provide information about subsequent credit premiums.

Trade Cost Analysis

Using TRACE data, Dimensional can compare its execution prices to those of other market participants and finds that its flexible trading approach provides trade price advantages that lower costs to investors.

STRATEGY APPLICATIONS AND ENHANCEMENTS

Variable Credit Approach

Dimensional creates its first strategies that invest across the full investment grade spectrum, implementing an approach that uses information in current credit spreads to vary credit exposure in pursuit of higher expected returns.

Market-Based Credit Monitoring

Dimensional uses price data from TRACE to continually monitor market-informed credit ratings and maintain the credit profile of strategy holdings consistent with each mandate.

Inventory Modeling for Trade Price Advantages

Dimensional begins monitoring transaction data through TRACE to develop dealer inventory models and locate bonds to capitalize on possible counterparty motivations.

Variable Credit Approach

Narrow Credit Spreads

Wide Credit Spreads

Dimensional's variable credit approach uses information contained in forward rates and credit spreads to dynamically vary exposure across credit qualities to bonds with higher expected returns.

Drivers of Expected Returns in Fixed Income

Decades of empirical research show forward rates provide information about differences in expected returns among bonds of different durations, credit qualities, and currencies of issuance.

Dimensional evaluates new research and implements strategies based on these sources, or dimensions, of expected returns.

The most recent decade saw the advent of direct trading between bond buyers and sellers. Dimensional executed its first **peer-to-peer bond trade** in 2014. By eliminating the bond dealer’s role in a transaction, trading parties could obtain lower bid-ask spreads, leading to cost savings. Today, peer-to-peer trading is an essential component of our daily implementation.

2010s

► In the 2010s, Dimensional also continued expanding its fixed income offering into new solutions, including our first strategies to offer exposure to **high-yield** bonds, **sustainability** and **social fixed income** strategies, and an innovative **inflation-linked US municipal bond** strategy.

TRACE also aided Dimensional’s entry into high yield. Leveraging daily corporate bond trade data, we performed extensive analysis into high-yield debt (bonds with credit ratings of BB or lower), concluding that the highest credit quality portion of the high-yield market (BB rated bonds) can be appropriate for certain strategies designed to target credit exposure, resulting in improved diversification and increased return potential. Our work on high-yield bonds culminated in making BB rated bonds eligible in our **targeted credit** strategy, which emphasizes securities rated A through BB.

Near the close of the decade, Dimensional introduced a new strategy that combines multiple innovations developed over decades of fixed income investing. Our **global core plus** strategy was designed for investors seeking a value-added core solution with a duration similar to that of the aggregate global bond market. In this strategy, we apply expertise in investing within duration constraints and

use information in forward rates to systematically vary the allocation across bonds of different durations, credit qualities (down to BB), and currencies of issuance. These potential sources of value are integrated into a single investment solution representing decades of progress in systematic fixed income investing.

Looking Ahead

At Dimensional, we are on a continual search for new research and ideas that may lead to advancements in fixed income investing. However, we do not lose sight of the foundational understanding of fixed income returns that has benefited investors over time.

We have seen trends come and go, and we expect to see more in the future. A current example is the rise of “smart beta” approaches in fixed income. Some investment managers propose that additional variables, such as company size, leverage, or bond momentum, are linked to expected bond returns. A recent study by Dimensional, conducted as part of our ongoing research into fixed income markets, found that most of the information these variables provide is already reflected in forward rates, originally examined by Fama in the 1970s.

The paper, “The Cross-Section of Corporate Bond Returns,”⁵ offered strong empirical support for the ability of forward rates to explain differences in expected returns across corporate bonds. In addition, the research found that, if a company’s stock underperforms the equity market in a given month, its bonds tend to underperform the bond market in the next month. While we have for many years evaluated a bond issuer’s recent stock price as part of our credit investing approach, this finding contributes to our understanding of the relation between short-term equity returns and expected bond returns.

As the 2020s begin, we have entered new areas, such as mortgage-backed securities, where TRACE reporting requirements make the market more transparent. We are also preparing to meet the challenges of conducting peer-to-peer trading in Europe.

Change is a constant, and we expect the evolution of research, market microstructure, and client needs to create new opportunities for investment innovation. At Dimensional, we look forward to continuing this tradition of innovation—in fixed income and elsewhere. It is key to our mission of delivering the best solutions we can to investors.

MAJOR RESEARCH AND MARKET IMPROVEMENTS	Direct Bond Market Trading Advanced trading platforms enable trades directly between asset owners, eliminating middle men from transactions and creating opportunities to reduce transaction costs.	Credit Research Expanded to High-Yield Bonds Dimensional finds that BB rated bonds can increase expected returns in a strategy that invests only in investment grade bonds—without significant impact to liquidity.
STRATEGY APPLICATIONS AND ENHANCEMENTS	Peer-to-Peer Bond Trading Capabilities Dimensional starts executing peer-to-peer trades where possible to seek reduced transaction costs in strategies.	Extended Variable Credit Approach to High Yield BB rated bonds become eligible in certain Dimensional strategies, providing greater ability to target higher expected returns with Dimensional’s variable credit approach.

“In science, what you want is the minimum number of factors that will explain something, not the maximum number.”

Professor Eugene Fama
 Nobel laureate, Director,
 and Consultant

Peer-to-Peer Trading

Today’s technology enables buyers and sellers to connect anonymously and directly. With no dealer markup to pay, both parties can take a share of the bid-ask spread, resulting in a more favorable price. We believe Dimensional’s investment philosophy and flexible approach to bond trading are well suited for peer-to-peer platforms.

“Dimensional” refers to the Dimensional separate but affiliated entities generally, rather than to one particular entity. These entities are Dimensional Fund Advisors LP, Dimensional Fund Advisors Ltd., Dimensional Ireland Limited, DFA Australia Limited, Dimensional Fund Advisors Canada ULC, Dimensional Fund Advisors Pte. Ltd., Dimensional Japan Ltd., and Dimensional Hong Kong Limited. Dimensional Hong Kong Limited is licensed by the Securities and Futures Commission to conduct Type 1 (dealing in securities) regulated activities only and does not provide asset management services.

GLOSSARY

Forward interest rate

The yield and expected capital appreciation of a bond based on current market prices.

Duration

A measurement of a bond's price sensitivity to interest rate changes. Generally, higher duration bonds are more interest rate sensitive than lower duration bonds.

Yield curve

A graph that plots yields at a specific point in time of bonds with similar credit quality but different maturity dates. A curve's slope can vary through time based on changes in the shape of the curve and the level of yields. Generally, curves can be upward sloping, downward sloping, or flat.

Spot exchange rate

The current settlement price to exchange one currency for another in the market.

Currency hedging

Investing in financial instruments intended to offset the impact of exchange rate fluctuations on bonds traded in a foreign currency.

Term exposure

A portfolio's general level of interest rate risk as reflected in its average duration.

Duration constraint

The average duration range allowed in a portfolio, which is usually specified relative to a market benchmark.

Over-the-counter

The secondary market where buyers and sellers trade bonds directly or through a dealer that maintains an inventory of bond issues.

Investment grade

Bonds with a relatively low risk of default, as indicated by their credit rating. Bonds rated AAA, AA, A, and BBB are considered investment grade.

Credit spread

The yield difference between bonds of similar maturity but different credit quality. A narrow spread indicates a smaller difference between yields of higher and lower credit quality bonds. A wide spread indicates a larger yield difference between higher and lower credit qualities.

Inventory modeling

The evaluation of specific bond issues and quantities held by a bond dealer.

Trade cost analysis

Describes various methods for assessing an investment manager's trading efficiency.

Liquidity

An asset's ability to be bought or sold quickly without a significant change in its price. The US Treasury bond market tends to offer the highest level of liquidity to bond investors.

Bid-ask spread

The difference between the highest price a buyer is willing to pay for a bond (bid) and the lowest price for which a seller is willing to sell it (ask).

High-yield debt

Bonds with credit ratings below those of investment grade (BB and lower).

How to Use This Book

For example, to find the annualized compound rate of return for the Dimensional US Large Cap Value Index for the interval 2000–2008:

- 1 Locate the column for the first year of the interval (2000).
Years are labeled at the top and bottom of each column.
- 2 Locate the row for the last year of the interval (2008).
Years are labeled at the beginning of each row.
- 3 The return can be found where the first year's column meets the last year's row.
In this example, the Dimensional US Large Cap Value Index had a compound rate of return of 1.7% per year for the nine-year period.

Dimensional Core Wealth Index Models

WEIGHTS

The Core Wealth Index Models represent Dimensional's most advanced thinking on global portfolio construction. These models replace the balanced strategies from past *Matrix Books* and embody the natural evolution in Dimensional's research, thought leadership, and collaboration with financial professionals. Constructed using mostly Dimensional indices, the models may inform expectations about the performance of different asset allocations over time and about return deviations vs. the market.

Weights as of December 31, 2019. Rebalanced monthly. For illustrative purposes only. The index models are unmanaged and are not subject to fees and expenses typically associated with managed accounts or investment funds. Indices are not available for direct investment. **Past performance is no guarantee of future results.**

Assumes all strategies have been rebalanced monthly. Highest and lowest one-year and three-year returns are calculated from periods overlapping monthly. **Annualized standard deviation is calculated from monthly data. All performance results of the Wealth Index Models are based on performance of indices with model/backtested asset allocations; the performance was achieved with the benefit of hindsight; it does not represent actual investment strategies. The model's performance does not reflect advisory fees or other expenses associated with the management of an actual portfolio. There are limitations inherent in model allocations. In particular, model performance may not reflect the impact that economic and market factors may have had on the advisor's decision making if the advisor were actually managing client money. Past performance is no guarantee of future results.**

Dimensional Core Plus Wealth Index Models

WEIGHTS

The Core Plus Wealth Index Models combine Dimensional's Core Wealth Index Model allocations with additional index components that increase the systematic emphasis on the reliable drivers of higher expected returns within equities and fixed income.

Weights as of December 31, 2019. Rebalanced monthly. For illustrative purposes only. The index models are unmanaged and are not subject to fees and expenses typically associated with managed accounts or investment funds. Indices are not available for direct investment. Past performance is no guarantee of future results.

Assumes all strategies have been rebalanced monthly. Highest and lowest one-year and three-year returns are calculated from periods overlapping monthly. Annualized standard deviation is calculated from monthly data. All performance results of the Wealth Index Models are based on performance of indices with model/backtested asset allocations; the performance was achieved with the benefit of hindsight; it does not represent actual investment strategies. The model's performance does not reflect advisory fees or other expenses associated with the management of an actual portfolio. There are limitations inherent in model allocations. In particular, model performance may not reflect the impact that economic and market factors may have had on the advisor's decision making if the advisor were actually managing client money. Past performance is no guarantee of future results.

World Equity Market Capitalization

As of December 31, 2019

WHERE DIMENSIONAL INVESTS: ■ DEVELOPED MARKETS ■ EMERGING MARKETS ■ OTHER

How do we measure the world? Thinking only in terms of landmass can distort investment decisions. Directly comparing the markets of nations produces some surprising results. Measures such as population, gross domestic product, or exports do not directly indicate the size or suitability of investments in a market. This cartogram illustrates the balance of equity

investment opportunities around the world. The size of each country has been adjusted to reflect its total relative capitalization. Of course, the world is in motion—there is no fixed relationship between markets, and their proportion can change over time. Viewing the world this way brings the scope of diversification into new light and helps clarify allocation decisions.

1. An example large cap stock provided for comparison.

In USD. Market cap data is free-float adjusted and meets minimum liquidity and listing requirements. Dimensional makes case-by-case determinations about the suitability of investing in each emerging market, making considerations that include local market accessibility, government stability, and property rights before making investments. China A-Shares that are available for foreign investors through the Hong Kong Stock Connect program are included in China. 30% foreign ownership limit is applied to China A-Shares. Many nations not displayed. Totals may not equal 100% due to rounding. For educational purposes; should not be used as investment advice. Data provided by Bloomberg. Diversification neither assures a profit nor guarantees against loss in a declining market.

Global Bond Market

As of December 31, 2019

BOND TYPE: ■ GOVERNMENT RELATED ■ TREASURY ■ CORPORATE

Viewing the world in terms of bond markets produces a very different perspective on countries and regions, as compared to their landmass, population, gross domestic product, or even stock markets. This cartogram shows the balance of the investment grade fixed income opportunities around the world, with the size of each country adjusted to reflect the relative size of its fixed income market. It may be surprising that the relative

sizes of a country's bond and equity markets are not necessarily the same. Different regulations and preferences regarding capital structures for companies—as well as differing requirements and methods for government funding—lead to different outcomes. These proportions can change over time, but viewing the fixed income world this way highlights opportunities for diversification in fixed income and helps clarify allocation decisions.

In USD. Data is from Bloomberg Barclays Global Aggregate Ex-Securitized Bond Index. Index excludes non-investment grade securities, bonds with less than one year to maturity, tax-exempt municipal securities, inflation-linked bonds, floating rate issues, and securitized bonds. Government Related is a combination of agency, local government, and non-corporate credit bonds. Many nations not displayed. Totals may not equal 100% due to rounding. For educational purposes; should not be used as investment advice. Data provided by Bloomberg. Diversification neither assures a profit nor guarantees against loss in a declining market.

The Randomness of Global Equity Returns

As of December 31, 2019

These two tables rank historical annual stock market performance for different developed and emerging markets from highest to lowest in each year. Each color corresponds

to a different country, and the patchwork dispersion of colors shows no predictable pattern in either the developed or the emerging markets.

Investors who follow a structured, diversified strategy are therefore more likely to capture the returns wherever they happen to occur in any given year. This diversified strategy also

reduces the risk of being too heavily invested in any one country that happens to perform particularly badly in any given year.

This material is solely for informational purposes and shall not constitute an offer to sell or the solicitation to buy securities. The opinions expressed herein represent the current, good faith views of the author(s) at the time of publication and are provided for limited purposes, and should not be relied on as such. The information presented in this book has been developed internally and/or obtained from sources believed to be reliable; however, Dimensional Fund Advisors does not guarantee the accuracy, adequacy, or completeness of such information. Predictions, opinions, and other information contained in this book are subject to change continually and without notice of any kind and may no longer be true after the date indicated. Any forward-looking statements speak only as of the date they are made, and Dimensional Fund Advisors assumes no duty to and does not undertake to update forward-looking statements. Forward-looking statements are subject to numerous assumptions, risks, and uncertainties, which change over time. Actual results could differ materially from those anticipated in forward-looking statements.

Indices are not available for direct investment; therefore, their performance does not reflect the expenses associated with the management of an actual portfolio. The returns of indices presented herein reflect hypothetical performance and do not represent returns that any investor actually attained. Changes in the assumptions upon which such performance is based may have a material impact on the hypothetical returns presented. Hypothetical backtested returns have many inherent limitations. Unlike actual performance, it does not represent actual trading. Since trades have not actually been executed, results may have under- or overcompensated for the impact, if any, of certain market factors, such as lack of liquidity, and may not reflect the impact that certain economic or market factors may have had on the decision-making process. Hypothetical backtested performance also is developed with the benefit of hindsight. Other periods selected may have different results, including losses. There can be no assurance that Dimensional Fund Advisors will achieve profits or avoid incurring substantial losses.

Data presented in the Growth of \$1 charts is hypothetical and assumes reinvestment of income and no transaction costs or taxes. The charts are for illustrative purposes only and are not indicative of any investment. Performance may increase or decrease as a result of currency fluctuations.

"Dimensional" refers to the Dimensional separate but affiliated entities generally, rather than to one particular entity. These entities are Dimensional Fund Advisors LP, Dimensional Fund Advisors Ltd., Dimensional Ireland Limited, DFA Australia Limited, Dimensional Fund Advisors Canada ULC, Dimensional Fund Advisors Pte. Ltd., Dimensional Japan Ltd., and Dimensional Hong Kong Limited. Dimensional Hong Kong Limited is licensed by the Securities and Futures Commission to conduct Type 1 (dealing in securities) regulated activities only and does not provide asset management services.

Eugene Fama and Ken French are members of the Board of Directors of the general partner of, and provide consulting services to, Dimensional Fund Advisors LP.

UNITED STATES

Dimensional Fund Advisors LP is an investment advisor registered with the Securities and Exchange Commission.

CANADA

First published April 2020. The Dimensional *Matrix Book 2020* was prepared by Dimensional Fund Advisors LP ("Dimensional Fund Advisors") and is distributed in Canada by Dimensional Fund Advisors Canada ULC ("Dimensional Canada"), the manager of the Dimensional Canada funds and a wholly owned subsidiary of Dimensional Fund Advisors. Dimensional Fund Advisors is an investment advisor registered with the United States Securities and Exchange Commission, an exempt non-resident investment fund manager in Canada, and is the subadvisor to the Dimensional Canada funds.

These materials have been prepared by Dimensional Fund Advisors Canada ULC. Commissions, trailing commissions, management fees, and expenses all may be associated with mutual fund investments. Unless otherwise noted, any indicated total rates of return reflect the historical annual compounded total returns, including changes in share or unit value and reinvestment of all dividends or other distributions, and do not take into account sales, redemption, distribution, or optional charges or income taxes payable by any security holder that would have reduced returns. Please read the prospectus before investing. Mutual funds are not guaranteed, their values change frequently, and past performance may not be repeated.

AUSTRALIA AND NEW ZEALAND

This material is issued by DFA Australia Limited (AFS License No. 238093, ABN 46 065 937 671). This publication is provided for information only. No account has been taken of the objectives, financial situation or needs of any particular person. Accordingly, to the extent this material constitutes general financial product advice, investors should, before acting on the advice, consider the appropriateness of the advice, having regard to the investor's objectives, financial situation and needs. Any opinions expressed in this material reflect our judgment at the date of publication and are subject to change.

IF YOU ARE A RETAIL INVESTOR, THIS DOCUMENT HAS BEEN PROVIDED TO YOU BY YOUR FINANCIAL ADVISER, WHO CAN HELP EXPLAIN ITS CONTENTS.

Dimensional Fund Advisors Ltd. (DFAL) does not give financial advice. You are responsible for deciding whether an investment is suitable for your personal circumstances, and we recommend that a financial adviser helps you with that decision.

The Dimensional and Fama/French indices reflected in this book are not "financial indices" for the purpose of the EU Markets in Financial Instruments Directive (MiFID). Rather, they represent academic concepts that may be relevant or informative about portfolio construction and are not available for direct investment or for use as a benchmark. Their performance does not reflect the expenses associated with the management of an actual portfolio. Index returns are not representative of actual portfolios and do not reflect costs and fees associated with an actual investment. Actual returns may be lower. See Sources and Descriptions of Data for descriptions of the Dimensional and Fama/French indices.

The recipient's continued acceptance of information and materials from DFAL will constitute the recipient's consent to be provided with such information and materials, where relevant, in more than one language.

RISKS

Investments involve risks. The investment return and principal value of an investment may fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original value. Past performance is not a guarantee of future results. There is no guarantee strategies will be successful.

Equity investment risks include loss of principal and fluctuating value. Small cap securities are subject to greater volatility than those in other asset categories. International investing involves special risks, such as currency fluctuation and political instability. Investing in emerging markets may accentuate these risks. Sector-specific investments can also increase these risks. Fixed income risks include loss of principal and fluctuating value. Fixed income securities are subject to increased loss of principal during periods of rising interest rates. Fixed income investments are subject to various other risks, including changes in credit quality, liquidity, prepayments, and other factors.

ON THE COVER

Over the course of nearly 40 years, Dimensional has pioneered a systematic approach to fixed income investing that uses information in current market prices to pursue higher expected returns. Research insights, market structure improvements, and clients' evolving needs have fueled innovation through the years. The front cover visualizes advances across four distinct decades and depicts the growing count of Dimensional fixed income strategies from 1983 through 2019.
