

Fiduciary Management is a financial advisory service for institutional investors that provides investment management, comprehensive fiduciary consulting and the coordination of fiduciary consulting activities with your other professional advisors. The continuous discretionary management of your investment portfolio is a core service that supports all of the other components of your comprehensive fiduciary plan. A Fiduciary Manager (typically trained as an Accredited Investment Fiduciary) is the professional advisor responsible for developing, managing and monitoring all of the various aspects of your comprehensive fiduciary plan. The Fiduciary Manager considers your income and expenses and all aspects of your balance sheet, including both assets and liabilities, in the management of your financial situation.
